

Over the years of conducting our business in Asia we have been in contact with many manufacturers who have requested us to assist them to find export markets for their products. At the same time we also had many overseas suppliers requesting us to source specific products produced in Asia.

This has resulted in our “Export Projects” service whereby we provide a partnership between overseas buyers and manufacturers from Malaysia, Indonesia, Vietnam and China.

Our initial practice is firstly to define the project specifications to ultimately enable to export defect free products to our buyers. These project specifications are the guide-line throughout the whole manufacturing process.

We specialize in the those products whereby a greater input of our expertise is required and avoid those standard “commodity” products

The partnership between our buyers and suppliers is the basis of our Export Projects service to ensure we achieve 100% project satisfaction for both parties.

As such our scope of services include fine-tuning of product specifications, sourcing for the right manufacturer(s), provide quality control, ensure on-time shipment and assist in export documentation.
