

APP Timber provides quality assurance by continuous monitoring the production at the manufacturer's facilities. We assist with technical expertise in the form of product data control, export product know-how and other information required completing the various projects.

We have technical quality personnel based at our various operations throughout Asia who are trained on a regular basis to ensure the proper technical expertise. They provide continuous quality control during all the phases of manufacturing.

All goods are inspected prior to final packaging.

We normally will provide a technical quality report to the overseas buyers upon completion of the manufacturing prior to loading the products in the container and shipment to final destination.
